SUMMARY

Computer Science and Technology undergraduate (5th Semester) with hands-on experience building full-stack web applications using React, Django REST Framework, and PostgreSQL. Seeking a Software Development Internship to apply skills in backend API design, database architecture, and frontend development while contributing to real-world engineering projects.

SKILLS

Programming Languages: Python, Java, JavaScript

Frontend: React.js, Next.js, Node.js, HTML5, CSS3, Tailwind CSS, JavaScript (ES6+)

Backend: Django, Django REST Framework, Streamlit, RESTful API Design

Database: PostgreSQL, Supabase, Database Schema Design

Tools & Platforms: Git, GitHub, VS Code, pgAdmin4

PROJECTS

College360 — Next-Generation AI-Driven College Management System [\(GitHub\)](#)

Personal Project

- Designed and developed a full-stack academic management platform for engineering colleges using React and Django REST Framework, backed by a PostgreSQL database with 26 tables and 18 enum types.
- Migrated the frontend from vanilla HTML/CSS/JavaScript to React and simplified the system from a 15-microservice design to a consolidated Django project.
- Delivered a tiered Placement Chance Predictor and resolved data integrity issues across 25+ tables while transitioning database hosting from local PostgreSQL to Supabase.

GameHub Online — Web-Based Game Store Platform [\(GitHub\)](#)

Personal Project

- Built a Streamlit-based e-commerce web application with a 400-product catalog, user authentication, cart, checkout/payment flow, and an admin panel, backed by Supabase.

Clear Flow — AI Complaint Classification & Resolution Engine [\(GitHub\)](#)

Group Project

- Developed a full-stack AI web application automating the complaint management lifecycle using Next.js, TypeScript, and a Python Flask backend.
- Integrated a Groq LLM (Llama 3.3) with a rule-based fallback engine to classify, prioritize, and detect fraud across 780+ processed complaints, recommending resolutions via a real-time owner dashboard (Recharts) hosted on Supabase.

KEY ACHIEVEMENTS

- Learned to translate messy, real-world requirements into a clean, scalable structure without losing accuracy.
- Gained a practical sense for turning a tangled, fragmented setup into something leaner and far easier to maintain.
- Picked up the discipline of moving a live system to new infrastructure while keeping everything running smoothly.
- Understood how to piece together an entire customer journey, from first sign-in to final purchase and beyond.
- Discovered how pairing predictive intelligence with straightforward logic checks makes decisions more trustworthy.

EDUCATION

Bachelor of Technology in Computer Science and Technology (CST)

Ahmedabad, Gujarat

LJ University

CGPA: 7.28 / 10.00 | Currently in 5th Semester (4th Semester Completed)

CERTIFICATIONS & ACHIEVEMENTS

- Exploratory Data Analysis for Machine Learning (IBM) — Coursera
- Inheritance and Data Structures in Java (University of Pennsylvania) — Coursera
- Finalist, TarkShaastra 2k26 Hackathon
